Eliminating the Gap Between Medical Data and Patient Care

Patient-Clarity® is a patient-centered collaboration platform that improves communication, reduces errors, streamlines workflow and thereby enables the best possible patient outcomes. Patient-Clarity transforms disparate medical data into actionable information. Through proactive, intelligent coordination and dynamic information sharing among care givers, Patient-Clarity facilitates every vital process from onset to completion, even in the most hectic and stressful environments.

Integration, correlation and intuitive presentation of healthcare data delivers the medical intelligence you need, when you need it.

- Easily navigate through medical information with an intuitive, visual Dynamic Patient Dashboard® (DPD)
- View any aspect of a patient's clinical status with a single tap
- Insightful presentation of actionable, time-correlated intelligence for better diagnosis and treatment
- No data duplication required
- In-context entry of diagnostic measurements, observations, and medical orders

- The Dynamic Medical Messaging System® (DMMS) distributes patient-centered information at the right time to the right care provider for the right treatment
- Automatic notification, tracking, and escalation
- Optimizes collaboration, clinical handoffs, and workflow
- Curtail medical errors and their associated cost in dollars and compromised quality of care

- Cost-effectively manage compliance and documentation requirements
- Provides quality controls and audit trails
- Continuously improve processes through transparency and better coordination of care
- Cloud deployment means quick, seamless deployment and no on-going system management overhead
- EMR-agnostic
- Facilitates physician alignment and ensures quality compliance
